seabirds are global travellers connecting oceans and seas all over the world and facing multiple threats at local and global scales seabirds are long lived top predators reflecting changes at lower trophic levels and are good models to assess ecological changes produced by human societies thus world wide collaborations are needed to understand seabird ecology and to develop effective conservation measures benefitting both humans and seabird populations this book provides a modern overview on seabird biodiversity studies it begins by covering the most up to date techniques to study seabirds and then focus on pragmatic issues related with interactions between seabirds and humans the use of seabirds as ecological indicators and conservation of seabirds it gives an updated insight on all these topics and highlights gaps that need further development for a comprehensive understanding of the relationships between seabirds and human actions this book covers the response of the seabird research community to a biodiversity crisis aiming to contribute towards environmental sustainability it should provide inspiration to a wide range of professionals and students including the much needed world wide collaboration between research groups and practitioners in this way seabird research and conservation provide an inspiration for the solution of global issues such as climate change

wetlands and grassland are important components of natural ecosystems which have rich values in maintaining ecological balance regional economy and human development wetlands can provide freshwater resources and food sources for human beings purify the water environment and mitigate climate change the grassland ecosystem has such ecological functions as windbreak sand fixation soil preservation climate regulation air purification water conservation and so on which are closely related to human survival and well being in recent years climate change and human activities have caused a profound impact on the structure and function of wetland and grassland ecosystems and the problems of decline in size and function have attracted extensive attention from researchers globally however there are still many uncertainties about the variety of wetland and grassland ecosystem composition structure and dynamics as well as how they respond and adapt to climate change and human activities

this book is a condensation of a large body of work concerning human learning carried out over a period of more than five years by dr sun and his collaborators in a nutshell this work is concerned with a broad framework for studying human cognition based on a new approach that is characterized by its focus on the dichotomy of and the interaction between explicit and implicit cognition and a computational model that implements this

framework in this work a broad generic computational model was developed that instantiates dr sun s framework and enables the testing of his theoretical approach in a variety of ways with this model simulation results were matched with data of human cognition in a variety of different domains formal mathematical and computational analyses were also carried out to further explore the model and its numerous implementational details furthermore this book addresses some of the most significant theoretical issues such as symbol grounding intentionality social cognition consciousness and other theoretical issues in relation to the framework the general framework and the model developed generate interesting insights into these theoretical issues

the research studies included in this special issue highlight the fundamental contribution of the knowledge of environmental history to conscious and efficient environment conservation and management the long term perspective of the dynamics that govern the human climate ecosystem is becoming one of the main focuses of interest in biological and earth system sciences multidisciplinary bio geo archaeo investigations into the underlying processes of human impact on the landscape are crucial to envisage possible future scenarios of biosphere responses to global warming and biodiversity losses this special issue seeks to engage an interdisciplinary dialog on the dynamic interactions between nature and society focusing on long term environmental data as an essential tool for better informed landscape management decisions to achieve an equilibrium between conservation and sustainable resource exploitation

this special issue is a platform to fill the gaps in drought risk analysis with field experience and expertise it covers 1 robust index development for effective drought monitoring 2 risk analysis framework development and early warning systems 3 impact investigations on hydrological and agricultural sectors 4 environmental change impact analyses the articles in the special issue cover a wide geographic range across china taiwan korea and the indo china peninsula which covers many contrasting climate conditions hence the results have global implications the data analysis modeling methodologies and conclusions lay a solid foundation for enhancing our scientific knowledge of drought mechanisms and relationships to various environmental conditions
